

**Everything you love
about *Viburnum davidii*,
with a neater, more
compact habit!**

***Viburnum davidii* 'Vibsid1'
PINCUSHION™** USPPAF, CPBRA

Our brand-new take on a classic favorite! This showy, evergreen to semi-evergreen, flowering shrub forms low, compact mounds of dark, glossy green foliage. Each large oval leaf is deeply veined lengthwise, with three curved lines. Round clusters of tiny white flowers appear April through May, attracting butterflies and other pollinators. In late summer to autumn, metallic blue berries born on reddish stems, and adored by songbirds, appear in abundance. Variable fall foliage colors from dull red to purple for added seasonal interest. A dependable grower in full sun to part shade, in moist, well-drained soil. Excellent as a hedge, border, or as a foundation plant.
